WSJ Briefing — Saturday, November 14, 2026

November 14, 2026

Executive Summary

The week's organizing fact is a removal. Jensen Huang is out at Nvidia — undone not by an earnings miss but by an affair with a woman tied to an accused Chinese spy. The tape answered first: the biggest weekly market-cap decline on record, AMD −8.75%, Dell −7.18%, and nearly $2 billion of retail money buying the dip.

Three threads follow. Terrain: a three-way Trump-Xi-Putin meeting convenes next week in Shenzhen, on Chinese soil, while the Kremlin is down to two attritional plans in Ukraine. Rates: a third straight month of firm underlying inflation has put a December rate *increase* back on the table — 30-year 5.470%, mortgage 7.27%. Throughput: an FAA groundstop, a 19-hour Microsoft 365 outage, food inflation returning, and a permitting regime that cannot build.

Cluster 1: Geopolitics & Defense

Shenzhen: the venue is the victory

"Trump to Hold Talks With China's Xi and Russia's Putin Next Week", by Marianne LeVine and Vera Bergengruen, puts three principals at one table in Shenzhen — China's tech hub and the corridor Washington has been fencing off through entity listings, a perimeter Treasury endorsed when Scott Bessent backed blacklisting Megaspeed ("Bessent Says Treasury Supported Blacklisting Megaspeed"). Washington arrives as one of three in someone else's capital; Moscow as a pariah restored to co-equal standing without conceding a trench.

"Putin Had Four Plans to Defeat Ukraine. He Only Has Two Left." — battlefield victory and a Trump-brokered deal have both dimmed, leaving Moscow betting on Ukraine's economic collapse and weakening European support. Both survivors require the war unresolved, so a summit supplies the time the battlefield no longer will.

Kyiv's balance sheet is now a domestic U.S. variable. Robbie Gramer and Maya Davis report (EXCLUSIVE) that "Democrats Order Musk to Preserve Records Over Ukraine Starlink Access" — "Senators say SpaceX satellite restrictions jeopardized Kyiv's military operations amid a barrage of Russian strikes" — and "Ukraine Reports More SpaceX Disruptions" backs the complaint.

Calibrated view: 70% probability of no signed Ukraine ceasefire framework emerging from next week's Shenzhen meeting within 90 days — (rationale: both surviving Kremlin plans require the war unresolved, and the report that Moscow's military and Trump-brokered paths have dimmed leaves no constituency at the table for a near-term settlement).

The intelligence war behind the Nvidia affair

"Behind the Nvidia Affair Sits a Vast Chinese Spying Machine" is the week's most consequential reporting: Max Colchester and Brian Spegele write that Beijing "is deploying the world's biggest intelligence-gathering operation to bolster its tech industry," and that U.S. officials worry Huang was ensnared. Emma Tucker's 10-Point leads on the same finding under "The Massive Chinese Spy Operation Targeting Western Tech and AI".

"A Mystery Businessman Introduced Jensen Huang to His Paramour. It Was Her Husband." reads, in intelligence terms, as a handled approach rather than a coincidence. "Senior U.S. Soldier Is Arrested in U.K. Over Allegations of Spying for Russia" shows the same collection economy working another customer the same week.

The response aimed at products rather than people: a Senate committee chair summoned Huang and the Commerce secretary ("Senate Committee Chair Requests That Huang, Lutnick Testify"), while *Risk Report* judges "Huang's Departure Unlikely to Mollify Congress". Congress is treating an intelligence failure as a disclosure failure, the easier hearing to hold.

See also: Cluster 3 for succession mechanics; Cluster 4 for the editorial board's verdict.

The Gulf: cheap probes, expensive answers

"Iran Escalates Low-Level Conflict With a Shot at Bahrain" — Jon Gambrell and Summer Said report "the U.S. said it intercepted the drone strike, the first known attack on the Gulf country in two months." A second front opened as "Iconic Saudi Tower Hit as Yemen's Houthis Target Riyadh", and "Iran's New Cyber Playbook: Create Real-World Havoc" describes a doctrine moving from data theft to physical disruption. Each probe is answered at full cost.

See also: Cluster 2 on crude's second straight weekly decline; Cluster 4 for "Iran's Assassins Are on the Loose" and Tim Sheehy's "If You Think War Is Unpopular, Wait Till You See Defeat".

Europe, and the price of having been punished

The Saturday Essay is the week's best economic argument, dressed as a travelogue. "What Greece Learned From Going Broke—and Others In Europe Still Haven't" — Margherita Stancati and Yannis Palaiologos report that "the most fiscally responsible country in Europe is the one you'd least expect." Prices teach what politics cannot, and the pupil is the one who was punished. It is measurable: France pays 4.92% on a 10-year against Germany's 3.398%.

Two adjacent stories test the premise. "A Missionary Pope Faces a Chain Saw-Wielding Populist in Argentina" sets Pope Leo's compassion for the poor against Javier Milei's overhaul, "symbolized by his trademark chain saw" (Ryan Dubé and Silvina Frydlewsky report). "The Unstoppable Prison Gangs Transforming Ecuador Into a Narco State", by Ryan Dubé, is the counter-case: Latin America's most peaceful country converted from inside its jail cells into a critical cocaine artery. "Kim Jong Un Remakes North Korea's Flag, Ditching Soviet-Era Version" is a small story with a large tell — a founding myth being rewritten as the patron that supplied it is discarded.

Cluster 2: Markets & Macroeconomy

The index print versus the factor

"U.S. Stocks Mixed on Nvidia Fallout Fears" is the accurate headline, by Rob Curran and Vicky Ge Huang: stocks "finished mixed as rate fears resurfaced and tumult at Nvidia spilled into the wider semiconductor sector, dragging down technology indexes." The Dow closed at 52,347.55 (+0.10%), the S&P 500 at 7,561.67 (−0.40%), the Nasdaq at 25,136.27 (−0.91%), the Russell 2000 at 2,790.49 (−0.31%).

The ordering is the story. All five laggards sit in one complex — AMD 534.06 (−8.75%), Dell 344.53 (−7.18%), Cisco 95.64 (−6.24%), Coherent 218.15 (−6.00%), SanDisk 885.01 (−5.59%) — while every leader is communications, services or payments: Charter 138.39 (+4.32%), Steris 264.32 (+4.29%), Global Payments 91.90 (+4.21%), FIS 29.54 (+4.16%), Fox Cl A 68.42 (+4.12%). A 13.07-point (1,307bp) spread in one session, with small caps falling less than the S&P, is a semiconductor de-rating rather than a rate shock. "Tech Stocks Fall as Next Week Brings Big Tests for the AI Trade" frames the next exam the same way: earnings, not the Fed. Airline shares sold off separately on the groundstop ("Airline Stocks Drop After FAA Temporarily Halts Flights").

Nvidia as collateral, not as a trade

"Nvidia Suffers Biggest Weekly Market Cap Decline on Record" reprices everything adjacent. "Individual Investors Bought Nearly $2 Billion in Nvidia Shares This Week" matters more: a measurable crowd-versus-price divergence,

and base rates resolve those in favor of the price. "Bulls vs. Bears on Nvidia Stock" and "Will Nvidia Affirm Huang-Era Financial Forecasts? (and Other Earnings Questions)" define the uncertainty — an interim chief executive asked to certify guidance built on deals she doubted.

The financing channel is tightening. "Nvidia-Backed Nscale Says It Needs More Financing Ahead of IPO" is the capex cycle refusing to wait for the succession. "Nvidia Drama Helps Push Bitcoin Below $70,000" is the purest liquidity read of the week, because it is not a carry story; "The Scandals That Brought Down Jensen Huang—A Timeline" is the document litigation will be built from.

The curve, not the headline

"Treasury Yields Rise as Inflation Worries Come Back" is half right. The 10-year moved 1.1 basis points to 5.145%, inside noise; the 30-year moved 4.1 to 5.470%, price down 25/32. But the 2-year *fell* 2.9 to 4.861% and the 3-year fell 3.3 to 4.914%. A front end that rallies while the long end sells off is a bear steepener — term premium, not an inflation forecast. Every maturity from three months to three years fell; the only instrument in that span that rose was the 1-month bill, up 6.2 to 4.012%. Funding, not forecast.

The fundamental case is real. Nick Timiraos and Matt Grossman report in "Fed Forced to Confront Case for Bigger and Faster Rate Rises" that a third straight month of firm underlying inflation reopens the question of how far and how fast; "Broad Price Pressures Firm Up Case for Fed Rate Increase in December" and "Wholesale Inflation Rose Last Month. The Fed's Preferred Gauge Likely Did, Too." supply the prints. The debate is about a *hike*, with the target range at 3.75%–4.00% (midpoint 3.875%), unchanged week over week and 127 basis points below the 10-year.

Calibrated view: 65% probability the Fed raises the target range by 25 basis points at its December meeting — (rationale: three consecutive months of firm underlying inflation plus rising wholesale prices and broad price pressures, the front end has not priced it — the 2-year fell 2.9bp on Friday — so this is a contrarian call against a term-premium-driven long end, not a market-following one).

Calibrated view: 60% probability the 30-year Treasury yield trades at or above 5.60% before Jan. 31, 2027 — (rationale: the 30-year sits at 5.470% in a clean bear steepener with the 2-year falling, a term-premium repricing rather than a policy signal, and the 30-year mortgage has already moved to 7.27% from 7.20% in a week).

The mortgage channel is where this stops being abstract: 7.27% on a 30-year fixed against a 52-week low of 6.11%, with the policy rate unchanged. Against the 10-year at 5.145%, the 30-year mortgage sits at a 212.5-basis-point spread — a lending channel repricing on duration, not on policy.

Dollar, oil, and carry

"WSJ Dollar Index Rises 0.84% This Week to 98.34" — up four straight sessions. Against a U.S. 10-year at 5.145%, Germany pays 3.398% (174.7 basis points less), Japan 2.862% (228.3 less), China 1.618% (352.7 less); only Australia at 5.129% sits within 2bp, and only the U.K. at 5.344% sits above.

"Japan Spent Record $50 Billion in Single Day to Bolster Yen" is the companion datapoint: Megumi Fujikawa reports a July operation inside a campaign that included rare joint action with the U.S. — and the dollar index is 98.34 today. Fifty billion dollars bought a level, not a trend. "Oil Futures End Week Lower" closes the Gulf loop: Brent practically unchanged, WTI off 0.2%, both down a second straight week.

The AI trade in the plumbing

"How the AI Trade Hijacked the Treasury Market for a Month" — James Mackintosh's Markets A.M. — describes a handful of names transmitting into duration, so a single-company event becomes a rates event. "The Stock Market's Bargain Bin Is Secretly Stuffed With AI Stocks" is Jason Zweig's warning that value funds do not deliver the cheap, boring exposure investors think they bought; "Fed Eyes Hedge Fund Leverage and AI Valuations as Risks" shows

supervisors agree. "Commodity-Trading Chief Calls for Aluminum Pricing Reform, U.S. Futures" is the same plumbing argument in metals.

Then the listing: "Anthropic Chief Tells Jamie Dimon He Hopes IPO Will 'Underpromise and Overdeliver'" — Kate Clark reports the company is expected to begin trading Thursday, targeting a valuation of roughly $1.33 trillion or more. When the seller pre-announces the discount, believe the arithmetic. "Will China's AI Industry Benefit From the Nvidia Turmoil?" and "AI After Huang: Stocks I'm Watching" are the two questions allocators now ask together.

See also: Cluster 3 for Microsoft's stock and Nscale's financing pressure; Cluster 1 for the export-control perimeter setting these multiples.

Cluster 3: Business & Tech Strategy

The succession at Nvidia

"Jensen Huang Has Been Ousted as Nvidia CEO" is the event; the handling is the story. "Before His Ouster, Jensen Huang Belittled the Executive Replacing Him" — Anissa Gardizy and Robbie Whelan report Colette Kress has questioned some of his dealmaking and that he called her "a deer in the headlights." Emma Tucker's 10-Point runs it as a headline: "Jensen Huang Called Her 'a Deer in the Headlights.' Now She Runs Nvidia."

The operational implication is not governance. The person asked to affirm Huang-era forecasts doubted the deals those forecasts rest on. "Nvidia Needs Three CEOs in One" — Steven Rosenbush's CIO Journal column — states the spec: dealmaker, technologist, operator. "The Five Times Colette Kress Weighed In on Nvidia's Earnings Calls This Year" is the nearest public record of how she thinks, and "They Were the Indispensable CEOs—Until They Weren't", by Chip Cutter and Theo Francis, supplies the base rate for companies that lost seemingly irreplaceable leaders.

Silicon Valley split. "In Jensen Huang's Ouster, Tech Billionaires See a Mistake—and a Lesson" — Rolfe Winkler reports Elon Musk and Palmer Luckey blasted the removal, some likening it to Apple firing Steve Jobs. "Jensen Huang's Downfall Is a Sign of Silicon Valley's Power Drain", Alan Murray's "The Leadership Message in the Nvidia Saga" and Cristina Lourosa-Ricardo's "What Jensen Huang's Downfall Means for Big Tech" take the other side. "How Donald Trump and Jensen Huang Forged Their Powerful Alliance" — Amrith Ramkumar, Brian Schwartz, Alexander Ward and Rolfe Winkler — explains why the outsider-to-confidant climb raised the political cost of doing nothing, and Greg Ip's "The Nvidia Affair Is Terrible Timing for Corporate America" puts it bluntly: boards are being handed a counterintelligence test with no playbook.

Calibrated view: 55% probability Nvidia's board names a permanent CEO other than Colette Kress within six months — (rationale: the board is asking for "three CEOs in one" from an interim the departing chief publicly belittled and who questioned the dealmaking current guidance rests on, which makes internal promotion awkward, so the board is more likely to run a search than to ratify the interim — but a full external search typically takes two quarters, which is why this is barely better than a coin flip).

Microsoft's nineteen hours

"Widespread Microsoft Outage Roils Businesses, Governments" and "Microsoft Service Restored After Widespread Outage, Company Says" bracket the disruption; the 19-hour duration is from Robert McMillan and Angel Au-Yeung's account, while Joshua Jamerson reports the restoration and the email backlog. The company's language is the tell: it "processed a backlog of emails." Restoration was the easy half; the backlog is the bill, in a system where one vendor carries government and corporate mail. "The Chaos and Unexpected Joys of a 19-Hour Global Email Outage", by Robert McMillan and Angel Au-Yeung, records the workplace snow day, and "Microsoft Stock Slips on Widespread Outage" prices it.

Deal risk, regulation and the listing window

"Railroad CEO's Loose Lips Threaten to Torpedo His $72 Billion Megadeal" is the week's cleanest lesson in what binds a transaction: a merger that size is a coalition of thousands of small consents, and one unguarded sentence resets every one. "CVS Breakup Won't Satisfy Washington. It Could Still Work for Wall Street." — David Wainer's Heard on the Street — makes the parallel case: a pharmacy spinoff will not quiet critics but may leave shareholders with a more valuable company. "Cartier Owner's Stock Slides on Slowing Demand for Jewelry" is the demand-side reminder that not every problem is structural.

Two enforcement items: "Cravath Employee Is Charged With Insider Trading Using Confidential Deal Information" — Corinne Ramey reports prosecutors say the employee netted $70,000 on client matters including Paramount's acquisition of Warner Bros. — and "Risk Report: Huang's Departure Unlikely to Mollify Congress", by Clara Hudson, carrying the Super Micro slide after a DOJ probe. That is the backdrop for Thursday's listing.

Calibrated view: 60% probability Anthropic prices its IPO at or below $1.33 trillion — (rationale: the chief executive's aim to "underpromise and overdeliver," Nscale needing more financing before its own listing, and AMD, the sector's closest listed proxy, falling 8.75% Friday all point to a clearing price at or under the headline number — but the only valuation datapoint in the file is "roughly $1.33 trillion or more," so this bets against it).

Throughput: the FAA, permitting, and the price of food

"Weekend Air Travel Woes Mount After FAA Lifts Nationwide Groundstop" is filed as a disruption that lifted. It did not lift; it converted. Alison Sider, Andrew Tangel and Jacob Passy report the disruption is "still expected to create travel problems that persist through the weekend" — aircraft, crews and passengers are out of position, and duty-time limits are not waivable by a later order, per standard FAA practice. Dawn Gilbertson's "I Was in the Air When the Groundstop Hit. My 84-Year-Old Mother Wasn't So Lucky." is the passenger view; "What Travelers Caught in the Groundstop Should Know" and "How a Friday Groundstop Threw College Football Saturday Into Chaos" measure the same failure in vacation plans and kickoff times. The busiest airspace in the country has little surge capacity: shutdown is instantaneous, recovery serial.

"This Permitting Overhaul Can't Come Fast Enough" is Greg Ip's diagnosis — even with an AI boom, it still takes too long and costs too much to build big things. "The Next Wave of Food Inflation Is Coming" shows the pass-through: grocery prices could rise again as surging energy costs and supply-chain delays lift producer costs, per Ian Hodgson, Konrad Putzier and Rebecca Cadenhead. Where permitting and skilled labor bind, each added dollar of capex bids up the same scarce inputs — why the long end sold off while the front end rallied.

Corporate execution had its stumbles. "Tesla Opens Sales Of Autonomous Cybercab For 'Select' Customers" — Sean O'Kane reports the push to sell a vehicle with no steering wheel or pedals comes amid a federal probe. "SpaceX's Latest Starship Mission Hits Early Setback" scrapped a booster-retrieval attempt after an issue early in flight. "Once Upon a Farm Working to Bring Back Recalled Toddler Snacks" is the recall-side version, "What It Takes to Get Your Wings Delivered During a Football Game—Fast and Hot" the counter-example, and "Is AI Taking White-Collar Jobs? What the Latest Numbers Tell Us" rounds out the labor side. One hybrid belongs here: "Powerful Trump Allies Aided a Chinese Vape Operation" — Liz Essley Whyte and Michelle Hackman report (EXCLUSIVE) that Chris LaCivita and his son are helping the Geek Bar importer capitalize on loosened tobacco rules.

See also: Cluster 2 on airline stocks and the mortgage-to-Treasury spread; Cluster 4 for the Medicaid delay and measles-status revocation — the same deficit in the public sector.

Cluster 4: Policy & Opinion

After Huang: the editorial board's verdict

"Of Course Jensen Huang Had to Go" states the position in one line: "The deep state at issue in the Nvidia scandal is China's, not America's." The populist critique of the administrative state is accepted in full and relocated offshore. "The

Fallout From the Fall of Jensen Huang" extends it; "I Fell for Jensen Huang's Lies", by Lauren Stoneman, is the first-person version and the least forgiving.

The columnists split. Peggy Noonan's Declarations column, "Jensen Huang Is a White House Scandal", asks what hearings will not answer: "What did Trump know and when about the Nvidia CEO's relationship with an accused Chinese spy?" Holman W. Jenkins, Jr., poses the rival hypothesis in "Jensen Huang and the World's Information Chaos" — "Was it a brilliant operation by Chinese intelligence or trivial gamesmanship that spun out of control?" The president's answer, per "Trump Says He Doesn't Know if Huang's Affair Was With a Spy", is that he does not know. Accountability now requires reconstructing one man's state of mind, which is why the question is asked rather than answered.

The Fed as a political institution

"Kevin Warsh's Plan to Remake the Fed: Fewer Rate Votes, More Deliberating" is a procedural answer to a substantive problem; the Federal Reserve confirmed it will not vote on rates at its October meeting next year. Legitimacy from process rather than responsiveness, at the moment the market has priced a December increase (Cluster 2). Nick Timiraos's "For Trump's Fed Ambitions, a Democratic Senate Poses the Biggest Hurdle Yet" supplies the counterweight — a Democratic majority would be the broadest check yet on presidential control of the central bank — and Emma Tucker reports Chris Van Hollen will challenge Chuck Schumer to lead Senate Democrats. "Democrats Promised to Fix the Economy. What Can They Really Do?" is the policy-side accounting.

The midterm readout

"Onetime MAGA Star Lauren Boebert Loses Colorado Re-Election Bid" — running for a fourth House term, she had clashed with Trump over the Epstein files. "California Voters Pass Ban on Wealth Taxes", by Paul Kiernan, locks down a state tax base through a billionaire-funded ballot measure, following the failure of a high-profile billionaire tax. The coalition cedes ground at home in the week it opens fronts abroad: "Inside Stephen Miller's Frenetic First Week as White House Chief of Staff" — Meridith McGraw, Philip Wegmann and Alex Leary report he is reshaping the policymaking process — is command-and-control, what you do when position is slipping.

The opinion page reads the results as vindication. "The Racial Progress Deniers" argues the midterms blow up Democratic myths about racism; "Democrats Will Certainly Overreach" (Matthew Continetti) and "Beware Socialism's Moderate Makeover" (Mary Julia Koch) are the forward-looking versions; "Blue City Blues", James Freeman's Best of the Web, is the local one. "Is There Any Escape From the Political Blame Game?" — Gary Saul Morson and Morton Schapiro — notes Republicans played it two years and the new Democratic majority probably will too. "A GOP House of Ideas, or Hacks", "Making Up for Lost Time on Judges", "An EV Mandate for Disneyland" and "College Rankings, Minus the Politics", ranking Texas at Austin first on ideological diversity and free speech, fill out the domestic agenda. "First They Came for the Children" borrows Niemöller for an Arizona and Texas school-choice fight — moral vocabulary doing work the argument does not.

The administrative state's ledger

"Trump Administration Delays Rollout of Medicaid Work Requirements" is the week's cleanest confession: Anna Wilde Mathews reports the requirements, expected to cause millions to lose coverage, now take effect in July. The policy exists, the machinery does not, and the schedule moved rather than the ambition. "U.S. Loses Measles-Elimination Status as Historic Resurgence Sickens Thousands" — Liz Essley Whyte and Jennifer Calfas, EXCLUSIVE — reports the Pan American Health Organization revoked the status, a stunning reversal for a country that kept the disease at bay for decades; such status is a lagging indicator of throughput, not intent. "Congress's Top Doctor Resigns Amid IG Findings of Lax Drug Handling" is the same diagnosis in miniature.

Two letters and two columns close the file. "Congressional Insider Trading Isn't as Common as You Think", by Roland Fryer, argues many claims — including those about Mr. Pelosi's Alphabet options — fall apart under scrutiny. "Does Pete Hegseth Deserve to Be Impeached?" and "Bob Woodward Puts Self-Interest Over Duty" run as Letters; "Jim

Jordan's MIGA Moment" was the most-read opinion item. "The North Dakota Town Where Data Centers Won", Travis Fisher's Cross Country column, and Joseph Bottum's "Antisemitism Made a Zionist of Me" are the weekend's most personal arguments.

Weekend, culture & lifestyle page

The headline-only file, in one pass: Ashley Wong's "Everyone's a Winner in the 'Call Her Daddy' Podcast Feud", in which Sofia Franklyn finally sells her side of a story that began when Alex Cooper took the show solo and signed $185 million in distribution deals; "Seniors Have Made Florida's Southwest Coast America's Richest Retirement Market", where retired homeowners in North Port-Sarasota-Bradenton sit on more than $100 billion in home equity; "Wealthy Parents Are Spending a Fortune to Keep Their Adult Kids Coming Home"; "See What the 'Super El Niño' Means for This Year's Ski Season", with western areas coming off one of the driest years on record; "A Tanker Lost Control and Hit a River Cruise Ship in New Orleans", where more than 100 people were rescued in what Louisiana's governor called a "miracle on the Mississippi"; "Top Takeaways From Joe Biden's New Memoir", in which Ken Thomas finds the former president settling old scores with little regret; and two AI essays, "Why I'm Not Losing Sleep Over the AI Apocalypse" and "How AI Diagnosed a Medical Mystery My Doctors Missed for Decades".

Consolidated Prediction Table

Five forward calls from Clusters 1 through 3; probabilities match the narratives, implied odds are the American-format price.

#	Prediction	Probability	Implied odds	Timeframe	Rationale
1	No signed Ukraine ceasefire framework emerges from the Shenzhen summit	70%	-233	90 days	Both surviving Kremlin plans require the war unresolved; military and Trump-brokered paths have dimmed
2	Fed raises the target range 25bp at the December meeting	65%	-186	Dec 2026 FOMC	Third straight month of firm underlying inflation, rising wholesale prices; contrarian — front end has not priced it (2-yr −2.9bp Friday)
3	30-year Treasury yield trades at or above 5.60%	60%	-150	By Jan. 31, 2027	Bear steepener (2-yr −2.9bp, 30-yr +4.1bp); mortgage already 7.27%
4	Nvidia names a permanent CEO other than Colette Kress	55%	-122	Six months	Board wants "three CEOs in one" from an interim Huang belittled; external search typically two quarters, so barely better than a coin flip
5	Anthropic prices its IPO at or below $1.33 trillion	60%	-150	Nov. 19, 2026 listing	CEO's "underpromise and overdeliver" framing; Nscale needs financing pre-IPO; AMD, the closest listed proxy, −8.75% Friday; bets against the only valuation datapoint, which is "roughly $1.33 trillion or more"

Invalidation levels

Each call is falsifiable on a specific print. The levels below are the ones that should retire the row, not merely weaken it.

• Row 1 (no signed Ukraine framework within 90 days) — wrong if the Shenzhen meeting produces a named negotiating format with a scheduled second session and a stated mandate to reduce military operations.

• Row 2 (December 25bp hike) — wrong if the November payroll or CPI print lands soft enough that the 2-year falls back below 4.70% before the December FOMC.

• Row 3 (30-year at or above 5.60% by Jan. 31, 2027) — wrong if the 30-year closes below 5.35% for three consecutive sessions.

• Row 4 (permanent CEO other than Kress within six months) — wrong the moment the board names Kress permanently, or if the six-month window closes with no permanent appointment named.

• Row 5 (Anthropic prices at or below $1.33 trillion on Nov. 19) — wrong if the listing clears above $1.33 trillion, in which case the "underpromise" framing was itself the pricing strategy.

Confirmations

Market data note

Stock prices and index closes, the S&P 500 leaders and laggards percentages (Charter +4.32% through Fox +4.12%; AMD −8.75% through SanDisk −5.59%), Treasury yields and their one-day changes, policy and consumer rates including the 30-year mortgage at 7.27%, and oil prices are all taken from WSJ Markets section data tables (CDP-extracted). Those figures are Friday, Nov. 13, 2026 4:00 p.m. ET closes and intraday marks, with the bond table stamped 5:03 p.m. ET on 11/13/26 — not live Saturday prices. Bitcoin's sub-$70,000 level is direction only.

Sourcing and scope

The 115 stories behind this briefing were captured from the WSJ homepage, World, Business, Markets, Opinion, Economy, Tech and latest-headlines pages on Nov. 14, 2026. Headlines, standfirsts and ledes are the available text; article bodies sit behind a subscription that lapsed on Sept. 25, 2026. Quotations are attributed to a named reporter, columnist, editorial board or named subject as identified in the source file.

Length accounting

Dash-stripped length is roughly 4,530 words: about 1,040 of those are bold, double-quoted story headlines — 115 story headlines, one of which appears twice — the cost of covering all 115 stories by title rather than paraphrase. Body prose is about 2,720 words across the four clusters, alongside a 160-word prediction table with a 156-word invalidation companion and a short executive summary. Full title-level coverage was kept rather than trading stories for a shorter file.

观察者评论

翟东升——体系/结构视角

翟东升观察：2026年11月14日

本周最该看的不是英伟达，是那条曲线。10年期5.145%，只动1.1个基点；30年期5.470%，上行4.1个基点；2年期反而跌2.9个基点到4.861%。长端抛、短端买，标准的熊陡。市场读成"通胀回来了"，那是误读。底层逻辑是：短端定价政策，长端定价主权信用。政策利率按在3.75%–4.00%不动，30年房贷一周内从7.20%跳到7.27%——212.5个基点的缺口不是货币政策造成的，是期限溢价在向居民部门收税。

这是结构性两难。三个月核心通胀粘性之后，12月加息重新摆上桌；但联邦债务的久期结构决定，每加25个基点，财政部在长端多付的利息远超政策利率本身。不能加，也不能降，于是市场替它加。制度熵增到这一步，利率不再是央行的变量，而是主权资产负债表的残差。

日本一天砸出500亿美元救日元，且有美方罕见的联合行动——这比汇率本身重要。500亿买到一个点位，没买到趋势。美元指数98.34、周涨0.84%，可对中国的10年期利差是352.7个基点。利差在那里，干预就是逆水行舟。所谓联合干预，是核心国替同盟的资产负债表兜底，已是物理天花板，不是政策技巧。

于是深圳那场三方会谈要放回这个框架读。地点在中国的科技走廊，华盛顿是三席之一，不是主人。普京只剩两个都需要战争不结束的方案，所以他要时间；美国要的是把长端的定价压力向外转移。真正的议程不在乌克兰，在结算货币。

英伟达是第三根柱子。一位CEO因一段关系下台，录得史上最大单周市值缩水，散户却砸进20亿美元抄底。这不是治理问题，是制度可信度——主权信用赖以成立的法律与情报基础——被自己的机器反噬。Anthropic周四要以1.33万亿美元以上估值上市，等于把AI叙事当最后一块抵押品，去托住一个正在重定价的长端。

一句话：7.27%的房贷，是这套体系向普通人开出的账单。

金灿荣——美国政治/战略相持视角

金灿荣观察：2026年11月14日

各位朋友，今天这份报纸很有意思。头版不是经济，不是战争，是一个人的下台——黄仁勋走了。

为什么？私情，对方据说跟中国间谍有关系。一周蒸发掉史上最大市值，AMD
一天跌百分之八点七五，硅谷那帮亿万富翁说，这跟当年苹果赶走乔布斯一样。这个类比挺可爱，但抓错了重点。

这个事情其实很简单。一家几万亿的公司，全部叙事系在一个人的皮夹克上——这本身就说明结构有问题。我们讲工业化本体论，工业能力长在产业链、工程师队伍、产业集群上，不长在明星CEO的嘴上。美国搞了三十年金融化，制造业掏空了，能寄托的就剩几个"神人"。神人一倒，全场就慌。这不是黄仁勋的问题，是这套体系的问题。

更好笑的是《华尔街日报》社论那句话：这件事里的"深层国家"是中国的，不是美国的。自己反间谍出了漏子，先怪对手手段高。这就是我说的，美国人现在很焦虑。

再看一条。特朗普下周要在深圳跟习近平、普京坐一张桌子。深圳是什么地方？是美国围堵最狠的那条科技走廊。现在美国总统到这条走廊上来开会，还只是三个人里的一个。场地本身就是结果。

普京那边，四套方案只剩两套，两套都要求战争别停，所以他要来要时间。乌克兰的钱袋子现在归美国参议院管，民主党让马斯克交记录，星链一掐，前线就打不动。

还有几条小事：全国航班停飞，微软邮件瘫了十九个小时，麻疹消除资格被取消。一个饭店老板，菜还没炒好先掀桌子——桌子掀了，厨房的火也灭了。这才叫战略相持：你打我不动，我打你也不动，最后比谁家水管不漏、机器还转。

我们赢了没有？我年纪大了，不说满话。但方向很清楚：东升西降不是口号，是流水线上的节拍。

宋鸿兵——货币/债务/周期视角

宋鸿兵观察：2026年11月14日

本周真正的事件不是英伟达，而是曲线的形状。两年期跌2.9个基点，三十年涨4.1个基点至5.470%——标准熊陡。政策利率中值3.875%，三十年5.470%，中间那160个基点不是通胀预期，是期限溢价：私人资本对"长期承诺"重新开价。前端在赌美联储不敢动，长端在赌别人替它持有三十年。当长端自行定价，央行对远端的主导权就流失了——金融高边疆的第一个缺口，从来不是被攻破的，是自己让渡的。

日本单日投入500亿美元托举日元，罕见地与美国联手，而美元指数仍收98.34、周涨0.84%、连涨四日。500亿美元买到了一个点位，没买到趋势。美元环流的回程是"顺差国积累储备—买入美债—资本回流"，日本是这条回路上最大的阀门；当它必须抛售资产保卫本币，阀门就在关小。干预失效本身就是数据。

从政策利率通向家庭的管道更直白：按揭7.27%，52周低点6.11%，政策利率一动未动，212.5个基点的价差是把久期风险转嫁给住户。德国3.398%、日本2.862%、中国1.618%，英国5.344%反超美国——旧帝国借钱比新帝国贵，这就是三变六反的现场记录。

英伟达史上最大单周市值蒸发，20亿美元散户抄底，美联储同时把对冲基金杠杆与AI估值列为风险。这不是一只股票的问题，而是整个系统的问题：它的股票是抵押品，抵押品重估，回购链条跟着重估，散户是最后一批流动性提供者。茨威格说价值基金里塞满了AI股票——单点故障的教科书定义：人人都以为持有分散的低风险敞口，其实持有的是同一个久期敏感的多头。Anthropic周四以1.33万亿美元挂牌，卖方先讲"少承诺、多交付"，请相信算术：周期的顶部，总是以叙事变成货币的形式出现。

物以稀为贵乃是投资的天道。今天稀缺的不是算力，是安全的长久期资产。
