WSJ Briefing — Friday, November 13, 2026

November 13, 2026

The founder premium unwinds.

Executive summary

• Jensen Huang's resignation ended the era after two affairs, one with a woman the Journal identifies as a suspected Chinese spy. Colette Kress — the executive Huang called "a deer in the headlights" — is interim CEO; a permanent search has begun.

• Suppliers de-rated harder than the principal: Nvidia 161.97, -2.54% (Friday pre-open), against AMD -7.51%, Dell -7.19%, SanDisk -6.50%, Coherent -5.94% (prior session), with Broadcom -5.50% and Arista -3.22% (pre-open tape).

• The 10-year was at 5.159% and December now prices a rate rise, not a cut. Producer prices cooled sequentially but stayed "well above trend" year-over-year.

• Yields fell for a month because the AI trade deflated, not because growth weakened. Bitcoin broke $70,000 for the first time since August, a sixth weekly loss.

• Accountability is unowned: Treasury backed blacklisting Megaspeed, Commerce did not act, a Senate chairman has requested that Huang and Lutnick testify, and the President says he does not know whether the affair involved a spy.

• Three adversaries have abandoned decisive victory for civilian cost: Putin has two plans left, Iran is hitting tankers and refrigerators, the Houthis reached Riyadh.

Cluster 1 — Geopolitics & Defense

Two plans, neither military

"Putin Had Four Plans to Defeat Ukraine. He Only Has Two Left." is the day's cleanest strategic accounting: battlefield victory and a Trump-brokered settlement have both dimmed, leaving a bet on Ukraine's economic collapse and European fatigue. "Ten Months of War to Gain 46 Square Miles: How Russia Is Failing on the Battlefield" supplies the denominator — a grinding campaign that bought ground at a price no staff college would defend. Once a belligerent cannot buy ground cheaply it buys time instead, and time purchased from other people's electorates is a loan, not an asset.

Kyiv carries the same risk. "Ukraine Reports More SpaceX Disruptions" — Review & Outlook, arguing Starshield restrictions help the Russians — describes a war fought through one vendor's permission. Robert Brüll's "Ukraine's New Defense Against Russian Drones" covers the tactical answer; the exposure is the vendor.

Calibrated view: 75% probability of a Russian cumulative territorial gain below 100 square miles within six months — (rationale: ten months produced 46 square miles, and both remaining plans target Ukraine's economy and European will rather than ground).

Iran prices the civilian layer

Feliz Solomon's "Iran's New Cyber Playbook: Create Real-World Havoc" documents the shift from data theft to physical pain — tankers, refrigerators. The board's "Iran's Assassins Are on the Loose" adds plots against U.S.

officials and air bases; "Iconic Saudi Tower Hit as Yemen's Houthis Target Riyadh" shows the proxy layer reaching the Saudi capital.

The energy interaction is what most coverage misses. The IEA sees a Q4 surplus as Gulf exports recover — the first since the Iran war began — yet WTI was at 89.33. A loosening physical balance with a holding price means the residual is a risk premium held by actors who cannot win ground but can set the marginal price of a barrel. "Vance Considers Direct Talks With Iran Hard-Liner in Push to End War" tests whether it can be negotiated away; the President has said the U.S. does not need a deal, which leaves it in place.

Calibrated view: 55% probability of another Houthi strike inside a Saudi population center within 90 days — (rationale: the Riyadh tower proves reach, and the IEA's surplus assumes exactly the Gulf exports such strikes target).

Coercion that produces dependence

"The U.S. Cut Cuba Off From the World's Oil. Now It Runs on American Fuel." is the year's most instructive sanctions story: the embargo pushed the island to a humanitarian brink, and American fuel shipments now keep it afloat. The instrument produced dependence, not collapse, and dependence binds the besieger. "U.S. Collected $12 Billion in Venezuelan Oil Sales, Returning Nearly All of It" repeats it in ledger form — a State Department report shows Caracas received most of the money while the President calls the arrangement profitable.

Rail: periphery and intelligence

"Kim Jong Un Remakes North Korea's Flag, Ditching Soviet-Era Version" is ceremony as institution-building. "Degrees Lead Nowhere. Jobs Don't Exist. Welcome to India's Youth Revolt." is the larger item: graduates cramming for long-shot exams, converting credential inflation into anger at Modi's ruling party. "U.S. Army Officer Identified After U.K. Sting for Alleged Russian Spying" names Lt. Col. Brandon Tyner; "Senior U.S. Soldier Is Arrested in U.K. Over Allegations of Spying for Russia" places him in a NATO rapid reaction command. "Someone Is Causing Chaos Across Europe. The Question Is: Who?" describes the unattributed sabotage confounding investigators.

Anne Neuberger's "Cyberattacks Are Coming for Us All" draws the conclusion: banks, hospitals and utilities are the target set, and the resilience is a purchase nobody has made. Adversaries have stopped trying to win and started trying to bill the civilian layer, where Western defense spending is thinnest.

Cluster 2 — Markets & Macroeconomy

The level, not the delta

"Producer-Price Inflation Cooled Last Month, Remains Elevated" carries two clauses: cooling sequentially, still "well above trend" year-over-year. The market traded the second clause. "Treasury Yields Lose Steam After Soft Producer Price Index" and "Two-Year Treasury Stabilizes as Eurozone, U.S. Bond Yields Rise" describe relief that never reached the price: the 10-year was at 5.159%, -2/32, roughly +0.8 basis points on 7.77 duration. Not a rally: indifference to the delta. "Week Ahead for FX, Bonds: Fed Minutes, U.K. Data in Focus" states the operative fact — December hike expectations rose on stronger jobs and higher inflation. "Dollar Supported by Hawkish Fed Expectations" adds the currency leg, Corpay calling the dollar overbought. "Wholesale Inflation Rose Last Month. The Fed's Preferred Gauge Likely Did, Too." reaches the same conclusion. "Stock Futures Higher as Cool PPI Print Buoys Sentiment" is the day's tell: Joe Stonor's copy says futures "struggled for direction" while longer-dated Treasurys "continued to sell off."

At 5.159% the S&P's earnings yield matches the risk-free rate only at 19.4x; hold a 1% equity risk premium and fair value is 16.2x. That is the arithmetic under an index at 7,557.25.

The 44% question

The S&P 500 was at 7,557.25, -0.46% (-35.15 points); Nasdaq 25,178.49, -0.74%; Dow 52,328.48, +0.06%; Russell 2000 2,794.19, -0.17%. Nvidia's 161.97, -2.54% mark sits at a rough 8% index weight — worth about -20 basis points — which would be 44% of a -46 basis point move if both marks were struck at the same moment. They were not: 161.97 is a Friday pre-open tape quote and the index table is the prior session. Treat 44% as an illustrative decomposition, not a session attribution. The laggards were 5-for-5 AI hardware: AMD -7.51%, Dell -7.19%, SanDisk -6.50%, Coherent -5.94%, Cisco -5.36%, with Broadcom -5.50% and Arista -3.22%. The leaders were 4-for-5 domestic defensive: AppLovin +4.01%, Steris +3.75%, Charter +3.41%, Keurig Dr Pepper +3.18%, Deckers +3.08%. Leaders averaged +3.49%, laggards -6.50% — a 9.99-point spread inside a 46-basis-point day.

The non-confirmation is the Russell 2000, whose decline was 29 basis points smaller than the S&P's rather than the 150-plus a real rate shock produces, with the KBW Nasdaq Bank Index flat to +0.05%. An idiosyncratic de-rating wearing a macro costume, then — which is why David Uberti's "Jensen Huang's Exit Will Test AI's Stocks, and Great-Man Theory" splits the trade by patronage rather than duration.

Mackintosh's inversion

"How the AI Trade Hijacked the Treasury Market for a Month" is the day's most underpriced signal: yields fell sharply as the AI trade deflated, not because the economy weakened. The 10-year now trades partly as a risk asset's shadow. "Bitcoin Holds Below $70,000 as Risk-Off Mood Pressures Crypto" and "Nvidia Drama Helps Push Bitcoin Below $70,000" confirm the same circuit — 68,923.24, -3.43%, a sixth weekly loss. The marginal buyer of long bonds and of crypto was the same levered growth book.

Cross-asset the divergence widens: gold 3,902.50, +0.45%; WTI 89.33, +0.66% — a gold/oil ratio of 43.7 barrels per ounce. Gold rose while Bitcoin fell: liquidity beta versus monetary hedge, and only one is being paid. "Oil Futures Extend Gains in Early U.S. Trading" and "U.S. Natural Gas Futures Return Some Gains" complete the commodity file.

The plumbing thins

Item 19 of Markets carried the most overlooked number. "Nvidia-Backed Nscale Says It Needs Additional Financing Ahead of Planned IPO" must tap markets to fund "a significant increase" in short-term spending — at 5.159%, while Bitcoin breaks $70,000 and its lead investor falls 2.54%. That is the bond market's channel into the capex cycle. "China's Moonshot AI Restructures to Pave Way for IPO" shows the same reflex from the other shore at a $50 billion pre-IPO valuation. "The Stock Market's Bargain Bin Is Secretly Stuffed With AI Stocks" is Jason Zweig's warning that value funds no longer sell what investors think they bought. "Bulls vs. Bears on Nvidia Stock" and "The Five Times Colette Kress Weighed In on Nvidia's Earnings Calls This Year" supply the case and the record.

Calibrated view: 62% probability of a Fed rate increase at the December 2026 FOMC meeting within five weeks — (rationale: hike expectations rose on strong jobs and above-trend inflation, and flat bank stocks rule out a growth scare doing the work).

Calibrated view: 55% probability of the 10-year trading above 5.25% at least once within seven weeks — (rationale: a -2/32 move on a soft print implies no duration bid, and the December meeting precedes year-end).

Rail: markets in brief

"European Stock Indexes Turn Positive as Oil Drops" and "Asia's Stock Rebound Fades as Nvidia Uncertainty Lingers": the same failed bounce, twice. "Eurozone Goods-Trade Deficit Widens on Higher Energy Prices" ties the import bill to fossil fuels. "Richemont Shares Drop After Cartier-Parent's Sales Growth Loses Some Shine", "Cartier Owner's Stock Slides on Slowing Demand for Jewelry" and "Aviva Sees Outlook on Track After Insurance Premiums, Wealth Inflows Rise" are the European earnings file. "Oil Prices Mixed as Traders Weigh Supply Outlook, Middle East Risks" and "Global Oil Market Set to Return to Surplus as Gulf Exports Recover, IEA Says" are one barrel. "AI Bots

Are Using Credit Cards. Banks Are Racing to Keep Up." is the structure story here: Stripe against JPMorgan over agentic commerce. "Cravath Employee Is Charged With Insider Trading Using Confidential Deal Information" ($70,000, Paramount and Warner Bros.) and "DOJ Says It Helped Freeze Nearly Half of More Than $6 Billion Stolen in North Korea's Binance Hack" close enforcement. "China Looks to Shake Up Centuries-Old Business of Insuring Ships" is the quiet giant: the authority to declare what is insurable is the authority to declare what is legitimate.

Cluster 3 — Business & Tech Strategy

The succession was the failure

Tim Higgins's "Before His Ouster, Jensen Huang Belittled the Executive Replacing Him" reframes the story: Kress had questioned some Huang dealmaking, and he called her "a deer in the headlights." Emma Tucker's "Jensen Huang Called Her 'a Deer in the Headlights.' Now She Runs Nvidia." turns the quote into a job description, and "Nvidia Starts Search for Next CEO" confirms the search began after the crisis. One chief executive since founding, no legible heir — that, not the affair, is the governance defect. "They Were the Indispensable CEOs—Until They Weren't" converts it into a curriculum of succession planning; "The Leadership Message in the Nvidia Saga" calls it founder dependence; "Nvidia Succession Shows Key Part of CFOs' Jobs: Serving as On-Call CEOs in a Pinch" admits the contingency was always the plan.

The hagiography and the autopsy ran the same day, and need not conflict. "Jensen Huang Built Nvidia. Its Chips Made the AI Boom Possible." is the past-imperfect case for the man; "A Timeline of the Scandals That Brought Down Jensen Huang" is two affairs, one with a suspected spy. The opinion page's line, argued in the Editorial Board column below, is separability — retire the biography, keep the rents. "Nvidia Shareholders Won't Miss Jensen Huang for Long" retires the doctrine at a profit: steadier hands may enrich shareholders better in the next phase. "Huang's Downfall Is a Sign of Silicon Valley's Power Drain" widens the frame to the industry's shifting power. "A Mystery Businessman Introduced Huang to His Paramour. It Was Her Husband." makes the counterintelligence case legible — Kang Wei appeared to accept the relationship and spoke openly of his wife Alice Huang's closeness to the Nvidia chief. "The 31-Year-Old Trader Who Called Out Jensen Huang's 'China Problem'—and Shorted Nvidia" is the market version: the bet was available early to anyone willing to be early.

Calibrated view: 70% probability of Nvidia naming a permanent CEO within six months — (rationale: a search is underway, an interim was disparaged by her predecessor, and Senate testimony creates pressure to present a stable counterpart).

The moat was access

The damage is not in market capitalization. The moat was access — a network spanning the White House, Beijing and the supplier chain that fed on his patronage — and access dies with the man. That is why suppliers de-rated harder than Nvidia: their demand ran through one person's introductions and financing, and the mark is arriving name by name rather than in one clean repricing. "Risk Report: Huang's Departure Unlikely to Mollify Congress" is the political version: resignation does not close the file. "Risk Report: Hackers Are Stealing AI Computing Power" adds that compute itself is a target, so the collateral behind the capex boom is also an attack surface.

The unowned gate

"Bessent Says Treasury Supported Blacklisting Megaspeed but Commerce Didn't Act" is not a scandal story but an ownership failure. Two agencies contesting a chokepoint means the chokepoint is unowned, and an unowned gate leaks: every week spent arguing who should have closed the route, the route stays open and Beijing pays nothing. "Senate Committee Chair Requests That Huang, Lutnick Testify" converts the dispute into a witness list; "Howard Lutnick Needs Friends After Spending Two Years Making Enemies" explains why Commerce is exposed — no coalition left to spend.

Plans that assume savings arrive first

"Widespread Microsoft Outage Roils Businesses, Governments" and "Microsoft Stock Slips on Widespread Outage": hundreds of thousands locked out of Outlook and Teams, and the equity taking the mark. "Baker McKenzie Looks to Abandon the Billable Hour as Default" is the sharper bet — AI upending legal pricing while the savings remain a forecast. "CVS Breakup Won't Satisfy Washington. It Could Still Work for Wall Street." makes the same trade. Both are financing plans in operating-plan clothing.

Rail: business in brief

"Kraft Heinz Has a Comeback Plan: Cheesy Ramen and High-Protein Jell-O"; "An American Furniture Maker Tried to Bring Jobs Back Home. It Didn't Work.", the reshoring counterexample; "A New York Construction Worker Fell for a Tiny Car—and Started a Rebellion", kei trucks against American vehicle rules; "Seniors Have Made Florida's Southwest Coast America's Richest Retirement Market", $100 billion of home equity in North Port-Sarasota-Bradenton.

Cluster 4 — Policy & Opinion

The blame game as export policy

The Editorial Board's "The Fallout From the Fall of Jensen Huang" states a priority ordering as a constraint of nature: controls can be tightened, but don't hurt American AI. Security is obligatory provided it costs the tech sector nothing. Megaspeed is framed not as whether the architecture works but as which agency failed to protect American primacy cheaply. Peggy Noonan's "Jensen Huang Is a White House Scandal" asks what the President knew, and when. "Nvidia Gets a Chinese Honeypot Lesson" treats the affair as a counterintelligence case study, the correct frame; "I Fell for Jensen Huang's Lies" is the first-person register. "Trump Says He Doesn't Know if Huang's Affair Was With a Spy" is the strategy in one line — distance without disowning.

A vacuum with a calendar

"Chris Van Hollen to Challenge Chuck Schumer for Senate Majority Leader" is a leadership race that is really a referendum on whether the caucus has a theory of the 2026 result. "Jim Jordan's MIGA Moment" is Kimberley Strassel's case for the new House GOP leader; "The Hegseth Impeachment Spectacle" and "The Hegseth Backfire" price the cost. "Something Is Rotten in the State of MAGA", "Trump Is the Author of the Ruin", "So Trump Didn't Steal the Elections?" and "A Chance for the GOP to Move Past Trumpism" are the post-mortem in four registers. "Democrats Will Certainly Overreach" and "Beware Socialism's Moderate Makeover" are the mirror warnings; "Best of the Web: Democrats Need a New Investigator" is James Freeman's version.

"The Vote Against the Wealth Tax Was a Verdict on Inflation" is the center. Joseph Sternberg's claim: politicians who would retire debt by devaluing the currency find inflation constrains them more tightly than bond markets do — the curve as a constitution no majority can amend. The tape agrees at 5.159%. "Voters' Low Pain Tolerance Helps Adversaries" names the political constraint that makes the monetary one binding.

Rail: opinion, health, small print

"Rear Admiral Resigns as Congress's Top Doctor Amid Probe" removes Brian Monahan, attending physician to lawmakers and justices since 2009. "Biden's Scaled-Back Book Tour Rekindles Questions Over His Health" — "Some days are better than others," the former president said — keeps a different succession question alive. The lighter file: "An EV Mandate for Disneyland"; "New York Tries to Force Catholics to Kill"; "Don't You Dare Listen to Your Employees"; "Chris Christie: 'Peer-to-Peer' Wagering Isn't Gambling? Don't Bet on It"; "Is a Fridge With Internet Access a Bad Idea?", more prescient than the op-ed page; "Congress Is Failing to Treat Lawmaking as a Serious

Job"; "Turning 50? Prostate Screenings Aren't Optional Anymore, Cancer Society Says".

Prediction Book

These five views restate the calibrated calls embedded in Clusters 1-3. They are document-level, not cluster-level, because two of them concern geopolitics rather than markets.

#	Prediction	Probability	Implied odds	Timeframe	Rationale
1	Fed raises rates at the December 2026 FOMC meeting	62%	-163	By 2026-12-16	Hike odds rose on jobs and above-trend inflation; flat bank stocks rule out a growth scare
2	10-year Treasury trades above 5.25% at least once	55%	-122	By 2026-12-31	-2/32 on a cool print shows no duration bid
3	Nvidia names a permanent CEO	70%	-233	By 2027-05-13	Search announced; interim was disparaged by her predecessor
4	Russia's territorial gain stays below 100 square miles	75%	-300	By 2027-05-13	Ten months bought 46; remaining plans target politics
5	Another Houthi strike inside a Saudi population center	55%	-122	By 2027-02-11	Riyadh strike proves reach; playbook rewards civilian cost

Confirmations

Market data note

Index levels and the leader and laggard percentages come from the source table headed "Index closes (1-day)"; bond yields, gold, bitcoin, crude and the bank index come from the companion table headed "Rates, commodities, other" in the same appendix — all prior session. Nvidia's 161.97 and the Broadcom and Arista quotes come from the homepage "pre-open movers" ticker tape (~07:01 ET). The two vintages are not interchangeable and must not be combined into one attribution. Reference levels from the tables: S&P 500 7,557.25, 10-year 5.159%, WTI 89.33.

Confirmed versus inferred

Confirmed: index levels and percentage moves; the 10-year's -2/32; both five-name leader and laggard lists with exact percentages; Bitcoin below $70,000; the IEA surplus call; Treasury's Megaspeed statement; the Senate testimony request; Nscale's disclosure.

Derived and inferred, not reported: Nvidia's roughly 8% index weight and the resulting 44% share of the decline, the 19.4x breakeven multiple and its 16.2x variant at a 1% equity risk premium, the 7.77 modified duration used to turn -2/32 into roughly +0.8 basis points, the gold/oil ratio, and every probability in the book. The morning copy contradicts itself on futures — headline higher on cool PPI, body "struggled for direction" — so the headline is cited as a headline.

观察者评论

翟东升——体系/结构视角

翟东升观察：2026年11月13日

黄仁勋的离场被讲成一个公司治理故事。底层逻辑不是治理，是主权信用的定价权正在被重估。十年期国债5.159%，12月市场开始定价加息而不是降息；PPI环比回落、同比仍远高于趋势。这个组合只说一件事：美联储既不能松，也不能紧——松则通胀失控，紧则付息压垮财政。这是结构性两难，不是政策选择。

真正的信号在别处。过去一个月收益率下行，不是衰退预期，而是AI交易的影子：长债的边际买家和比特币的边际买家是同一批杠杆成长仓位。比特币跌破七万、连续第六周下跌，黄金却站上3903——流动性beta与货币对冲，只有一个在被支付。这不是风险偏好的问题，是抵押品的问题。

供应商跌得比主角更狠，AMD、戴尔、SanDisk全线重挫。因为它们的需求不跑在订单上，跑在一个人的人脉与融资里。护城河是access，access随人而死，所以重估只能一个名字一个名字地来。

Megaspeed的荒诞在于：财政部支持拉黑，商务部未动，两个部门争夺同一个卡口，等于这个卡口无人所有。无主之闸必然漏水。帝国的物质基础就是这样系统性钙化的——不是被对手打穿，是自己找不到谁来关门。

平行体系那边，Moonshot以五百亿美元pre-IPO估值重组，中国开始介入船舶保险这门延续数百年的生意。定价什么可保，就是定价什么合法——这是主权职能的迁移，而且迁移得很安静。古巴被断油后靠美国燃料运转，委内瑞拉石油收入几乎全额返还：制裁买来的不是崩溃，是依赖，而依赖最终绑住的是施暴者自己。

金灿荣——美国政治/战略相持视角

金灿荣观察：2026年11月13日

各位朋友，今天的头版很有意思。黄仁勋走了，英伟达自己跌了2.5%，可给它供货的那些企业跌得更狠——AMD跌7.5%，戴尔跌7.2%，闪迪跌6.5%。为什么？

这个事情其实很简单。英伟达的护城河从来不只是芯片，是"通道"——白宫的门、北京的门、供应链的门，都系在他一个人身上。人一走，通道就断了。这就像一家饭馆，老板天天站在门口招呼客人，菜其实一般；老板一走，大家才发现后厨没人会炒菜。美国这些年最大的毛病就在这里：金融做得漂亮，工厂搬走了，连个备份都没留。一家公司干了三十多年只有一任CEO，这不叫传奇，这叫没有接班人。

所以你看华盛顿在吵什么？财政部说支持把Megaspeed拉黑，商务部说没动手。两个部门争的是"谁该关门"，不是"门要不要关"。门没人管，就一直在漏。国内政治也一样：范霍伦要挑战舒默，乔丹往上走，国会忙着换座位，没人修屋顶。十年期国债到了5.159%，十二月市场开始押加息——不是经济多好，是没人愿意替这个赤字买单。

再看外面。普京四个方案只剩两个，十个月打下46平方英里，打不动了，就改成熬，赌乌克兰的经济和欧洲的耐心。伊朗不炸军营了，去搞油轮和冰箱；胡塞打到利雅得。这是什么？这是打不赢你的军队，就去砸你家的电器。古巴更妙：美国把油断了，今天古巴烧的是美国的油——制裁制裁出一个依赖，绳子另一头拴着自己。

一句话：美国人现在很焦虑，因为它发现自己最擅长的不是造东西，是收租；而收租的权力，正在一张一张地掉。这就是大变局的本质。

宋鸿兵——货币/债务/周期视角

宋鸿兵观察：2026年11月13日

今天市场读的是一个人的下台，我看的是一个系统的单点故障。

黄仁勋离任本身不是新闻，新闻是供应链跌得比主角更狠——AMD跌7.51%，戴尔跌7.19%，SanDisk跌6.50%，博通跌5.50%，而英伟达只跌2.54%。如果把这轮AI繁荣看作一套电路，英伟达不是电源，而是那条唯一的总线：下游的订单、融资、交付，都要经过同一个人的引荐与信用。总线一断，问题不在某一只股票，而在整个回路瞬间失去负载方向。这是单点故障的教科书形态。

与此同时，十年期到了5.159%，十二月开始为加息定价；PPI环比降温，同比仍高于趋势。请注意这里的力学关系：过去一个月收益率下行，不是因为经济转弱，而是因为AI交易自己在泄气。长债的边际买盘和比特币的边际买盘，原来是同一本加了杠杆的成长股账户——比特币跌破七万、六周连跌，就是这个账户在收缩。黄金站上3900还在涨。流动性贝塔与货币对冲，只有后者在收钱。

真正被低估的是管道收窄：Nscale在5.159%的资金成本下，上市前还要追加融资。这是债券市场通往资本开支周期的阀门，阀门正在关小。

另一侧，中国开始动手做船舶保险。你控制了承保权，就控制了"什么算合法"——这才是金融高边疆，比任何一只芯片股都重。Moonshot五百亿美元估值、Stripe与摩根大通争夺AI代理信用卡的清算入口，是同一条战线的不同段位。

美元的环流正在逆转。哈瓦那烧的是美国的油，委内瑞拉的油款又几乎全数退回——制裁的终点不是崩溃，而是依赖。这不是某届政府的问题，而是整个系统的问题。

Consolidated briefing with Observer commentaries. Version 3. November 13, 2026.
