The Wall Street Journal — Daily Briefing

November 11, 2026

Wednesday, November 11, 2026:

Wednesday, November 11, 2026. Veterans Day. U.S. Treasury markets are closed; equities are open. All equity, commodity and currency figures below are intraday marks taken near 10:05 ET, not closing prints.

Executive Summary

The Fed's problem changed shape overnight. For two years the question was when the cutting cycle would resume. Wednesday's front page answers a different one: how many *hikes* are coming. A third consecutive month of firm underlying inflation, combined with hawkish Fed commentary, has put a December increase back in play with the 10-year at 4.990%, the dollar at a four-week high and the yen at a two-month low despite a record single-day Japanese intervention in July.

The AI complex split into a hardware trade and a credibility trade. The Nasdaq rose 1.29% to 25,389.04 while the Dow fell 0.05% to 52,208.10 — a 134-basis-point spread inside one session. CoreWeave's earnings and a $133 billion backlog lifted Sandisk (+11.79%), Micron (+8.50%) and AMD (+3.59%). In the same hours, Nvidia retained Wachtell Lipton to investigate whether the company was the target of foreign espionage, OpenAI reported $10 billion in revenue against continuing heavy losses, and SoftBank wrote down a turbine reservation large enough to power six Hoover Dams.

Washington changed hands before the news did. Democrats won Congress on November 3 and take over in January. Pete Hegseth survived a House impeachment effort this week, but the story is explicit that Democrats are expected to revive it. The more consequential shift is at the Fed: Nick Timiraos reports that a Democratic Senate is now the broadest check yet on the president's efforts to control the central bank.

The war's material tail is mispriced. OPEC output is back near prewar levels, yet crude traded at $87.45 (+1.64%) and Brent recovered above $92. Houthi strikes hit an iconic Saudi tower, tankers carrying Russian diesel for the U.S. shifted course for want of buyers, and Poland's Orlen cancelled a Qatari LNG contract outright.

The trust deficit is now a market input. A $26 million cyber heist in Cranbury, New Jersey went undisclosed until after the election. A 41-year-old U.S. Army soldier was arrested in Britain on allegations of spying for Russia from inside a NATO command. SEC enforcement penalties fell to about $1 billion, an 18-year low.

Cluster 1: Geopolitics & Defense

1.1 The Nvidia story has acquired an intelligence dimension

The Nvidia story crossed a threshold this week. "Law Firm Wachtell Lipton to Lead Nvidia Internal Investigation" reports that the elite New York firm will probe whether the technology company was the target of a foreign espionage effort — a mandate about state actors, not about an executive's private conduct. No source in the file states that the probe arises from the Huang affair; the two threads are adjacent, not linked. That framing matters because it changes what the investigation can produce: a security finding rather than an HR finding.

The political response has already moved. "Scandal Revives Push for Chip Restrictions on Capitol Hill" and the morning risk file's "Risk Report: Hackers Are Stealing AI Computing Power" describe two distinct vectors — export-control tightening and the theft of compute itself. Holman W. Jenkins Jr. argues in "China's Jensen Huang Caper" that "before going off half-cocked, we ought to ask how Beijing thinks it benefits," a caution that assumes a rational adversary rather than a lucky one. The editorial board is less patient: "Nvidia Gets a Chinese Honeypot Lesson".

"The Morning Risk Report: How Hackers Steal Millions in AI Computing Power" (Richard Vanderford) makes the second vector explicit: the compute itself is the target, and the theft is measured in millions. Taiwan is the quiet casualty. "Jensen Huang Affair Strains Taiwan's Devotion to Its Hometown Hero" (Austin Ramzy) describes a birthplace whose national identity is partly invested in one executive. "Resilience of the Global AI Boom Is Being Tested" and "Nvidia Scandal Tests the Resilience of the Global AI Boom" (Tim Higgins) ask the strategic question directly: Huang is "the biggest cheerleader of the 'next industrial revolution'" — could it carry on without him? "The Nvidia Affair Is Terrible Timing for Corporate America" (Greg Ip) answers from the governance side.

Calibrated view: 65% probability that Nvidia's internal investigation produces a disclosure within 90 days that forces a board-level governance change — a separation of the CEO from an external-facing role — but no criminal referral against the company — (rationale: Wachtell's mandate as reported is whether the *company* was an espionage target, and "AI Is Testing the Limits of Corporate Governance" frames the issue as process, not liability).

1.2 Iran: the war that will not conclude

"Pete Hegseth Survives House Impeachment Effort" carries the day's largest comment count — 1,370 — and a forward-looking clause: GOP leaders blocked the move, and "House Democrats are expected to revive the effort when they take control of Congress in January." Damian Paletta's "House GOP Saves Hegseth—for Now" adds that the House GOP also picked Jim Jordan to lead the conference.

On the ground, the editorial board's "Iran Doesn't Think the War Is Over" notes the U.S. again moved aircraft from a British air base after threats, and "The Hegseth Impeachment Spectacle" treats the House vote as political theater rather than accountability. Tim Sheehy's "If You Think War Is Unpopular, Wait Till You See Defeat" invokes Truman to argue that history vindicates politically costly decisions. "Iconic Saudi Tower Hit as Yemen's Houthis Target Riyadh" and "To Cross the Red Sea, Shippers Email Houthi Rebels. Read Their Inbox." describe a shipping lane governed by correspondence with a militia.

The diplomatic track is running on a separate clock. "U.S. Overture to Russia on European Security Sparks Alarm" reports that U.S. officials want Ukraine ceasefire work to proceed *alongside* talks on Europe's future security architecture — a linkage that alarms allies because it prices their arrangement into a settlement they do not control. "Ten Months of War to Gain 46 Square Miles: How Russia Is Failing on the Battlefield" quantifies the stalemate; "A Soldier Cut Off His Own Foot to Survive. Then Came a Daring Drone Rescue." renders its human cost.

One second-order effect deserves attention: "Global CO2 Emissions to Fall as Iran War Cuts Fossil-Fuel Use" reports that a consortium of climate scientists now expects a decline driven by reduced fossil consumption — an outcome no climate policy produced, delivered instead by a supply shock.

Calibrated view: 70% probability that a revived Hegseth removal or censure effort is formally filed in the new Congress within its first 100 days — (rationale: the front-page story states the expectation directly, and Paletta's column treats "for now" as the operative phrase).

1.3 The spy inside the command structure

"Senior U.S. Soldier Is Arrested in U.K. Over Allegations of Spying for Russia" is the clearest institutional failure of the day: a 41-year-old assigned to a NATO rapid reaction command structure in the U.K., arrested on allegations of spying for an adversary. "U.K. Police Arrested a U.S. Army Soldier on Allegations of Spying for Russia" is the What's News

version, bundling it with rate anxiety and Anthropic's founder windfall.

Alongside it, "U.K.'s Worst-Kept Secret: Who Was the Celebrity Accused of Preying on Teens" examines the David Walliams case — allegations he denies — as a study in Britain's libel regime and its limits on press freedom. Two very different stories about the same country's information controls.

Cluster 2: Markets & Macroeconomy

2.1 The repricing: from cuts to hikes

"One More Rate Hike Is Looking Like the Beginning, Not the End" (Emma Tucker's 10-Point) states the new regime in its headline; the same newsletter carries the spy arrest and the Cranbury cyber heist as separate items alongside it. "Fed Forced to Confront Case for Bigger and Faster Rate Rises" (Nick Timiraos and Matt Grossman) is the day's most important story. "A third straight month of firm underlying inflation reopens the question of how far and how fast the central bank must go." "Broad Price Pressures Firm Up Case for Fed Rate Increase in December" (Matt Grossman) supplies the detail: consumer prices "climbed notably again in October from the previous month, extending a stretch of stubborn inflation."

Two supporting prints matter. "Solid Jobs Report Leaves Inflation, Markets to Settle Fed's December Call" notes recent data point toward another increase, with the caveat that "a more sustained AI selloff could argue against one." And "Hiring Defied Expectations With 165,000 Jobs Added in October" confirms the labor market is not cooperating with the disinflation story.

The international transmission is already visible. "Bank of England Raises Rates for First Time Since Start of Iran War" attributes the move to energy prices lifted by the conflict — though those prices have since fallen on hopes the midterms produce an end to it. "Asian Bond Yields Rise on Growing Expectations for Fed Rate Hike" (Sherry Qin and Kimberley Kao) confirms the export of U.S. tightening.

Calibrated view: 75% probability the Fed raises its target range at the December meeting — (rationale: three consecutive firm CPI months, hawkish official commentary as reported by Timiraos, a solid 165,000-job print, and a 10-year already at 4.990%).

2.2 Rates, currencies, and the limits of intervention

The tape shows a narrow move and a loud narrative. The 10-year closed Tuesday at 4.990%, down 7/32 in price, or roughly 2.5 basis points higher in yield, with Treasurys shut for the holiday. "U.S. Treasurys Pause on Market Holiday After Inflation-Fueled Selloff" (Emese Bartha) and "Eurozone Bond Yields Little Changed" both note the absence of a Treasury print to follow.

The dollar did the work instead. "Dollar's Strength Could Persist on U.S. Rate-Rise Prospects" reports a four-week high against a basket of currencies, with ING expecting near-term firmness. "Yen Slumps as Fed Rate-Hike Bets Boost Dollar" puts the yen at two-month lows — and "Japan Spent Record $50 Billion in Single Day to Bolster Yen" records that Tokyo burned a record single-day sum in July, including rare joint action with the U.S., and still lost the level. Intervention without a rate differential is a donation.

"For Trump's Fed Ambitions, a Democratic Senate Poses the Biggest Hurdle Yet" (Timiraos) is the political leg of the same trade: a Democratic majority would be "the broadest check yet" on presidential influence over the central bank.

Calibrated view: 70% probability the 10-year trades above 5.00% before year-end — (rationale: 4.990% is 1bp from the level, the hike path is repricing toward December, and the run-in is shortened by the holiday, and "Fed Speakers, Tech Earnings: What to Watch the Rest of the Week" flags a dense calendar).

2.3 Equities: a rotation, not a verdict

The index spread is the signal. Nasdaq +1.29%, S&P 500 +0.89% to 7,587.79, Russell 2000 +0.42% to 2,833.36, Dow -0.05% to 52,208.10. VIX at 18.66–18.72, down about 4%.

CoreWeave did the lifting. "Nasdaq Jumps After CoreWeave Earnings", "Stock Market Today: Nasdaq Jumps After CoreWeave Earnings", "CoreWeave Rallies, Lifting Cloud and Chip Stocks", "European Chip Stocks Climb After CoreWeave Results Fuel AI Optimism" and "Nasdaq Futures Rally as AI Optimism Returns" describe one event propagating across three continents before the U.S. open.

The leaders were almost purely semiconductors and hardware: SNDK 961.42 (+11.79%), BE 205.00 (+10.56%), LITE 644.71 (+10.10%), DELL 365.38 (+9.27%), MU 786.73 (+8.50%). The ticker strip confirms the breadth: AVGO +5.89%, LRCX +4.33%, AMD +3.59%, CSCO +2.50%, NVDA +2.28%.

The laggards tell you what was sold. CLX -2.81%, BF.B -2.55%, KMB -2.32%, GIS -2.28%, DPZ -2.28% — four of five are consumer staples. This is a discount-rate rotation out of bond proxies, not a referendum on artificial intelligence. "Stocks to Watch: CoreWeave, Nvidia, TSMC" and "Why CoreWeave Matters So Much for the AI Trade" frame it more dramatically than the prices do. A healthcare-policy long runs the other way: "Hospital Stocks Are Feeling Blue, in a Good Way" and "A Democratic Congress Suits Hospital Stocks" (David Wainer) note that a Democratic Congress promising lower healthcare costs suits hospital equities — a rare policy-driven bid inside a rates-driven tape.

The overlooked print sits in the related-news rail: "Two Days Before Today's Selloff, Data Put Global September Chip Sales Up 146.8% Year to Year" — published November 5, two days before the selloff, and the strongest fundamental reading in the dataset.

2.4 Commodities: a freight premium, not scarcity

"OPEC's Oil Production Nears Prewar Levels on Saudi Rebound" (Giulia Petroni) reports October output returned toward prewar levels via alternative pipelines. If supply is restored, why is crude at $87.45 (+1.64%)? "Oil Prices Rebound as Middle East Supply Risks Persist" (Farhan Rafid) answers: Brent recovered above $92 "as renewed strikes tempered expectations of a diplomatic resolution." "Crude Futures Pick Up After Heavy Selling" notes futures had slid to two-month lows on peace optimism first. The residual is at least a $4.55 spread between Brent and the U.S. crude benchmark — a risk premium priced per barrel delivered, not per barrel produced.

"Trump's Plan to Import Russian Diesel Stalls on the High Seas" (Alexander Osipovich, Rebecca Feng, Collin Eaton) is the cleanest example of sanctions friction: tankers bound for the U.S. "shifted course following difficulties finding buyers." "Poland's Orlen Cancels Qatar LNG Supply Deal After Months of Force Majeure" marks the first known cancellation with QatarEnergy since the war began. "U.S. Natural Gas Futures Continue to Climb" cites cooler forecasts, high LNG feedgas and lower production.

Gold at 4,023.80 (-0.16%) against a dollar up 0.48% is a telling non-move: no one is buying the hedge the headlines imply they need. "Gold's Outlook Remains Compelling in Long Term" has Julius Baer arguing inflationary pressure should ease next year, letting the Fed be less aggressive than feared.

2.5 Crypto, tokenization, and the AI-adjacent bid

"Crypto Traders Bet Anthropic Will Be Worth $1.8 Trillion After IPO" measures speculative reach: crypto traders are betting that a private AI company's post-IPO value will exceed the public valuation target. "Nasdaq-Backed Payward Launches Tokenized Versions of European Stocks" (Joe Stonor) extends the same logic to 200+ U.K. and European names. "Alibaba to List Its Chip Business" is the Asian analogue — unlocking a captive semiconductor asset into a market hungry for exactly that exposure.

2.6 The AI financing complex, marked to market

"OpenAI Continues to Suffer Heavy Losses as Revenue Rises to $10 Billion" (exclusive) is the number that anchors this cluster. The company "improved its adjusted operating margin but remains far off from profitability." "OpenAI's Earnings, by the Numbers" and "Money Quote: AI Computing Power Is in High Demand" supply the supporting detail. "Anthropic to Seek $1.3 Trillion Valuation in IPO" (Berber Jin and Corrie Driebusch) is explicitly "a litmus test for investors on edge over the AI trade"; "Anthropic Founders' Stakes Are Worth $18 Billion Apiece at IPO Price" adds that seven insiders will each sell about $250 million while keeping total voting control.

"CoreWeave Meets Wall Street Expectations, Shares Rise" reports a $133 billion backlog. "CoreWeave Finds a Workaround to Capital Constraints—for Now" (Asa Fitch) and "CoreWeave's Financing Playbook" describe the mechanism — and the "for now" is doing real work in that headline.

Cluster 3: Business & Tech Strategy

3.1 The capital-intensity problem nobody wants to name

Set the numbers side by side. CoreWeave's backlog is $133 billion; OpenAI's revenue is $10 billion. The source does not break the backlog down by customer, but a commitment book of that size is only intelligible if a handful of AI labs are underwriting it — and the largest such counterparty books an order of magnitude less revenue than the commitments it would be carrying. "CoreWeave Finds a Workaround to Capital Constraints—for Now" is the honest headline of the week: the workaround is a bridge, and bridges need re-underwriting.

SoftBank supplies the failure case. "Masayoshi Son's Huge Bet on Electrical Turbines Backfires" reports the company reserved enough gas turbines "to generate the power of six Hoover Dams," costing billions in losses. The loss reads as a timing error — not a demand error — on a permitting and interconnection constraint that capital cannot clear.

"AI Is Testing the Limits of Corporate Governance" (Steven Rosenbush) connects the financing structure to the oversight structure, and "Is AI Taking White-Collar Jobs? What the Latest Numbers Tell Us" supplies the labor-demand question underneath the capex. "About Your Next Board Meeting" (Erle Norton) is blunt about what boards will be asked.

Calibrated view: 55% probability CoreWeave returns to public or private capital markets for additional financing within six months — (rationale: the reported workaround is explicitly temporary, the backlog requires buildout ahead of receipts, and "Why CoreWeave Matters So Much for the AI Trade" ties its funding access to the whole complex).

3.2 Reshoring meets arithmetic

"An American Furniture Maker Tried to Bring Jobs Back Home. It Didn't Work." (Stu Woo, 974 comments) is the most consequential business story on the page. The Krinskys moved manufacturing back from Vietnam to stay ahead of shifting trade policy and "the numbers didn't pencil out." Every tariff argument in Washington now has a counterexample with a balance sheet attached.

Adjacent industrial stories point the same way. "Can Hotels, Libraries and Apartment Towers Absorb America's Timber Glut?" (Ryan Dezember) proposes mass timber as a demand sink for a domestic surplus. "Toyota's Scion Brand Returns With Japan's Forbidden-Fruit Minitrucks" is an automaker hedging against its own electrification bet. "Nissan, Back in Red, Cuts Sales View on China Slump" shows the cost of losing the Chinese market. "Why High Beef Prices Are Here to Stay", "I Have a Beef With the Price of Steak" (Matthew Hennessey) and the shrinking cattle herd describe food inflation with a multi-year supply lag. "Masayoshi Son's Huge Bet on Electrical Turbines Backfires" again — the same capital-intensity lesson in a different sector.

3.3 Deals: a regulatory wall in London, an open door in the North Sea

The U.K. Competition and Markets Authority had a busy week. "McCormick's $65 Billion Unilever Foods Tie-Up Could Harm Competition, U.K. Regulator Warns" (Aimee Look) gives the parties one week to address concerns. "AkzoNobel-Axalta $25 Billion Merger Could Harm Competition, U.K. Regulator Warnings" (Michael Hennessey) threatens a Phase 2 referral. Meanwhile "KKR, Germany's RWE Invest $16 Billion in U.K. Wind-Power Projects" — Vanguard West and East in the North Sea — clears without drama. Capital flows to what regulators permit, not to what strategists prefer.

Elsewhere: "Western Union Scraps $500 Million International Money Express Takeover" (Colin Kellaher) died on California regulatory pushback — a state, not a federal agency, killing a cross-border payments deal. "Hapag-Lloyd Raises Guidance Again on Strong Freight Rates" (Dominic Chopping) is a war-adjacent winner: longer routes, higher rates. "Siemens Energy Shares Jump on Steeper Profit Targets Through 2030" (Adam Whittaker) and "Vestas Wind Systems Shares Drop on Earnings Miss, Narrowed Guidance" (Dominic Chopping) split the renewables equipment trade. "Dangote Cement Shelves Secondary London Listing" (Adam Whittaker) reads the London market and declines. "EU Takes Aim at Influencer Marketing, Deceptive Online Tactics With Revamped Rules" (Edith Hancock) adds compliance cost to digital distribution.

3.4 Real assets, at the top of the market

"Australian Billionaire James Packer Sells Aspen Mansion for $42.68 Million" (exclusive) lands "amid a slowdown in the tony Colorado ski destination's high-end market." "Bella Hadid Buys Historic Colorado Mountain Home for $5.5 Million" (exclusive) buys into the same valley at a different price point. "Another Potential Palm Beach Teardown Hits the Market for $75 Million" (exclusive, E.B. Solomont) prices a 1.4-acre Intracoastal lot bought for about $7 million in 2000. "A Mini-Exodus Unfolds at Blackstone's Marquee Real Estate Team" (Craig Karmin) reports departures plus a splintering apartment market in Boise. Luxury clearing, institutional talent leaving, and rental divergence are three readings of one cycle.

3.5 The corporate-politics interface

"Democrats Are Wasting No Time Investigating Corporate America's Biggest Names" and "White House Warns Democrats Against 'Blatant Criminality' in Investigation Demands" (Meridith McGraw and Natalie Andrews) describe a two-front war beginning before the new Congress is seated. "The $26 Million Cyber Heist Rocking a Small New Jersey Town" (Scott Calvert, 283 comments) is the local case with national implications: public money missing, undisclosed until after the election. "SEC Enforcement Penalties Fall to 18-Year Low" (Dave Michaels) reports about $1 billion obtained — the lowest since the 2008 crisis. Enforcement capacity is falling exactly as the investigative queue lengthens.

Cluster 4: Policy & Opinion

4.1 The midterm verdict, as the editorial board reads it

The board's Wednesday output is a post-mortem with a thesis. "A Short Lesson in Why Republicans Lost" (565 comments) states it in one line: "Consumer prices keep outpacing the rise in average hourly wages." "Both Parties Were Wrong on Gerrymanders" argues "Democrats owe the Supreme Court another apology." "The California Wealth Tax Goes Down" (266 comments) reads the result as voters declining "French socialist economics" — a companion to "Progressives Lose California Wealth Tax Battle—but Aren't Conceding the War" (461 comments), which reports opponents declaring victory over Proposition 40 while progressives claim national momentum.

The wider verdict is harsher. "The GOP Got Trounced. Now What?", "The GOP's Defeat Was Truly Massive", "Trump Is the Author of the Ruin", "So Trump Didn't Steal the Elections?", "Something Is Rotten in the State of MAGA" and "Do All Elections Have Consequences?" are the range. "Let the 2028 Presidential Campaign Begin" (William A. Galston) starts the next cycle on page one of the same paper. "A 'Blank Template' in the War on Business" (James Freeman) and "Bernie Bros Plan a New War on Business" preview the legislative agenda. "Needed: a Lame Duck Congress That Isn't Lame", "Money for Nothing in the Midterms" and "This Is the Last Chance to Confirm Originalist Judges" are the transition mechanics. "John Thune Isn't to Blame for the GOP Wipeout" (Zach Kessel) and "Russell Brand Was Hiding in Plain Sight" (Louise Perry) round out the Free Expression page.

4.2 Where the voters actually were

Greg Ip's "Voters Were Anxious About Much More Than the Economy" (556 comments) is the corrective to the board's arithmetic: "Affordability was crucial, but Americans also appeared dismayed about what has happened to their country under President Trump." "Democrats Promised to Fix the Economy. What Can They Really Do?" asks the follow-through question. "Is Trump Getting the Voters' Message on Immigration?" (Jason L. Riley, 296 comments) notes he "admits he was 'too tough' on the border, but then taps Stephen Miller to be his chief of staff." "How Do You Like Those Tariffs Now?" (David Hebert) sits directly next to the Krinskys' furniture reversal — the two should be read as one document.

4.3 Cyber, defense and the enforcement gap

Scott Bessent's "Scott Bessent: Our Best Cyber Defense Is American Silicon" (327 comments) argues the U.S. "needs to maintain its lead to reap the full benefits of our technology and protect the country" — an industrial-policy argument delivered as a security argument, and the policy counterpart to the Huang affair. "Iran Attacks Europe's Refrigerators" is carried in the file as a title only, but sits alongside that same infrastructure theme.

4.4 Letters and the rest of the page

The letters desk ran a mini-debate on tax administration — "America's Complex Tax Code" ("we should simplify the system") and "Raise the Standards for Tax Return Preparers" — alongside "Pro-Lifers and a Timid GOP" (68 comments) and "Grief, Graveyards and the Soul Going Home" on unrelated ground. "Notable & Quotable: Trump on Forgiveness" and "Pepper…and Salt" fill the traditional slots.

4.5 Domestic, Culture & Lifestyle Rail

Beyond the market and policy core, this edition carried a dense culture and lifestyle file worth registering as one block: "'Carnaval de Luz': U2 Returns With a Stylistic Sampler" (the band's first new album since 2017 "struggles to cohere"); "Ticket Resale Grew With Sold-Out Stadiums. Now It's Marking Up Poetry Slams." (speculative selling on StubHub); "Iowa's Next Governor Joins the Very Short List of Politicians Who Used to Be Models" (Rob Sand, Italian Vogue, Prada); "Kennedy Family Joins Effort to Block Construction of Trump's Arch" (the project would "permanently cast shadows" over graves).

Sports, culture and the weekend page. "He Quit Basketball to Work in a Warehouse. Now He's the NBA's Newest Star." (Yaxel Lendeborg and the Warriors); "The Hotshot NFL Dealmaker Who Just Mortgaged His Team's Future—Again" (Jaguars GM James Gladstone); "To Fix Its Nightmare Offense, the NFL's Best Defense Turns to an Old Friend" (Vikings acquire Kirk Cousins, per Andrew Beaton); "See What It Takes to Turn a High-School Athlete Into a Business" (NIL reaching younger athletes); "The Mystery Behind a 50-Year-Old Factory Part Flying Off the Shelves"; "The Fan Who Rescues Lost Songs From Extinction, One Very Polite Email at a Time" (Rob Johnson, Katie Deighton); "'Ocean of Bones' Review: A Deep Dive for Answers" (the slave ship Guerrero, 1827, Mark Yost).

Personal finance and the Journal Reports page. "Your House vs. the Stock Market: Which Has Been a Better Investment?" (the S&P 500 beats housing in every state over 40 years); "Planning for College Aid? The Federal

Student-Loan Rules Just Changed"; "Stock Funds Cling to a 10.3% Gain for 2026"; "How Kickstarter CEO Everette Taylor Traded the CMO Title for the Top Job" (Nat Ives); "Leadership Lessons From EY's Former CEO" (Walden Siew); "A Missionary Pope Faces a Chain Saw-Wielding Populist in Argentina" (Pope Leo and Javier Milei, Ryan Dubé and Silvina Frydlewsky); "New Zealand's Conservatives Narrowly Lead in Election" (Christopher Luxon, late ballots pending); "Spain Hit by General Strike as Cost of Living Takes Center Stage Ahead of Elections" (Mauro Orru); "Asian Market Meltdown Traps Some Traders"; "The U.K. Aims Sanctions at Israel, Hits the Cayman Islands"; "Chinese Drones, Spies and Honey Pots"; "Israel Can Achieve a Unity Government"; "Even Blue States Support Female Athletes"; "Democrats Ignore Voters' Message at Their Peril"; "The Race to Remake the U.S. Auto Market"; "Why the Lights Go Dark in Cuba"; "More Hiring at Small Firms".

Market Talk roundups. "Auto & Transport Roundup: Market Talk"; "Financial Services Roundup: Market Talk"; "Basic Materials Roundup: Market Talk"; "Energy & Utilities Roundup: Market Talk"; "Tech, Media & Telecom Roundup: Market Talk"; "China Forex Reserves Edged Up in October". One legal story that belongs here rather than with enforcement: "The Legal 'Nuclear Option' That Threatens to Upend the Baseball Lockout" (Jared Diamond) examines an antitrust strategy with labor-law consequences well beyond sports.

Consolidated Prediction Table

Numbered 1–5, restating the calibrated views set out in Clusters 1–3. Odds are decimal (1/probability) — a lower figure means a more confident call.

#	Prediction	Probability	Implied odds	Timeframe	Rationale
1	The Fed raises its target range at the December meeting	75%	1.33	Dec 2026 FOMC	Third straight firm CPI month; hawkish commentary per Timiraos; +165,000 October jobs
2	The 10-year Treasury yield trades above 5.00%	70%	1.43	By 31 Dec 2026	4.990% is 1bp away; hike path repricing; Treasury supply after the holiday
3	Nvidia's internal probe yields a governance disclosure forcing a board-level change, with no criminal referral against the company	65%	1.54	90 days	Wachtell's reported mandate is espionage-target, not executive liability; governance framing dominates coverage
4	CoreWeave raises additional capital from public or private markets	55%	1.82	6 months	The reported financing workaround is explicitly "for now"; $133B backlog requires buildout ahead of receipts
5	A revived Hegseth removal or censure effort is formally filed in the new Congress	70%	1.43	First 100 days	Front page states the expectation; "for now" framing in the Paletta column

---

Confirmations

Sourcing and attribution

Every factual claim above traces to a story in `wsj_stories.md`, compiled from the WSJ homepage, World, Business, Markets & Finance, Opinion, Economy and Latest Headlines pages, CDP-extracted on November 11, 2026 between 07:00 and 07:10 PST. Article bodies are paywalled — the WSJ subscription was cancelled September 25, 2026 — so this briefing rests on headlines, standfirsts, ledes, bylines and the market-data tables, all of which are public. Quotations are confined to that material and attributed to the named party in the same paragraph, and bylines are given only where the source records one: Tim Higgins's "biggest cheerleader of the 'next industrial revolution'"; Timiraos and Grossman on how far and how fast; the Krinskys' numbers not penciling; Ip on voters "dismayed about what has happened to their country"; Riley on Trump admitting he was "too tough" on the border; Bessent on maintaining "our lead"; Jenkins on asking "how Beijing thinks it benefits"; the Walliams allegations he denies; the arch casting "permanently" shadows; U2's collection that "struggles to cohere"; Son's turbines matching "six Hoover Dams". Editorial-board positions are attributed to The Editorial Board, not to reporters.

Market data note

Stock prices, S&P 500 leaders/laggards percentages, bond yields, and oil prices in this briefing are from WSJ Markets section data tables (CDP-extracted), captured near 10:05 ET on November 11, 2026. These are intraday marks, not closing or settlement prints — the U.S. equity session was still open and crude had not settled. The U.S. Treasury market was closed for Veterans Day; the 10-year quote of 4.990% (−7/32) is Tuesday's close carried forward, as "U.S. Treasurys Pause on Market Holiday After Inflation-Fueled Selloff" and "Eurozone Bond Yields Little Changed" both note. Index levels: DJIA 52,208.10 (−0.05%), S&P 500 7,587.79 (+0.89%), Nasdaq 25,389.04 (+1.29%), Russell 2000 2,833.36 (+0.42%), DJ Total Market 74,875.60 (+0.87%). Leaders: SNDK 961.42 (+11.79%), BE 205.00 (+10.56%), LITE 644.71 (+10.10%), DELL 365.38 (+9.27%), MU 786.73 (+8.50%). Laggards: CLX 103.60 (−2.81%), BF.B 30.04 (−2.55%), KMB 108.19 (−2.32%), GIS 33.81 (−2.28%), DPZ 322.54 (−2.28%). Ticker strip: NVDA 172.75 (+2.28%), AVGO 351.53 (+5.89%), AMD 533.70 (+3.59%), CSCO 100.61 (+2.50%), LRCX 232.02 (+4.33%). Others: VIX 18.66, gold 4,023.80 (−0.16%), bitcoin 73,475.33 (−0.27%), crude 87.45 (+1.64%), dollar index 98.01 (+0.48%), KBW Bank 175.13 (+0.46%), S&P GSCI 684.78 (+1.05%). Brent above $92 as reported in the text of "Oil Prices Rebound as Middle East Supply Risks Persist".

Coverage and structure

167 source entries (158 distinct headlines) across seven WSJ pages; four clusters (Geopolitics & Defense, Markets & Macroeconomy, Business & Tech Strategy, Policy & Opinion) plus this Confirmations section and the consolidated table. Stories that carried only a headline and standfirst are grouped under "Domestic, Culture & Lifestyle Rail" rather than dropped. Where a story legitimately spans two clusters — the Huang affair in both Geopolitics and Business, oil in both Markets and Geopolitics, the Cranbury heist in both Business and Policy — it is cited in each rather than forced into one.

What this briefing does not claim

It does not claim to know the content of paywalled article bodies. It does not infer the day of the week for any market move unless the source supplies it. It does not treat pre-close marks as settlements. And it does not assert that CoreWeave's backlog is undeliverable — only that its delivery is contingent on capital markets that the source describes as cooperative only "for now."

观察者评论

翟东升——体系/结构视角

翟东升观察：2026年11月11日

美联储的难题一夜之间换了形状。两年来的问题是降息何时重启，今天的问题是要加几次。十年期美债4.990%，美元四周新高，日元两月新低——而东京此前曾单日投入创纪录的五百亿美元、还罕见地拉着美方联合干预，依然没守住那个点位。底层逻辑是：不改变利差的干预，本质是一次单向捐款。

但这不是货币政策的问题，这是主权信用的定价问题。市场用加息预期给美元加分，说明在利差层面美元仍是稀缺抵押品；可同一份数据里，黄金4,023.80几乎纹丝不动——真正该避险的时候，没人买避险资产。这说明美元的强是相对的强，不是绝对的强：它强在欧洲与日本的更弱，强在平行体系尚未建成。这是结构性两难的现行版本——既不能大幅降息，债务付息与AI资本开支都靠低成本资金续命；也不能真正紧缩到位。

值得注意的是政治的介入。民主党拿下参议院，被描述为对总统控制央行"迄今最广的制约"。我的判断是，这不触及债务结构那道物理天花板，只是把铸币权的争夺从行政分支挪到立法分支——制度熵增，不是制度修复。

AI那一侧更直白：CoreWeave积压订单1,330亿，OpenAI收入100亿。订单是承诺，收入是现金，中间隔着资本市场"暂时"的配合。一个边际回报率趋零的行业靠融资结构撑估值，和美元靠利差撑汇率，是同一逻辑的两层皮。真正脆弱的从来不是价格，是支撑价格的那套制度可信度。

金灿荣——美国政治/战略相持视角

金灿荣观察：2026年11月11日

各位朋友，今天这份报纸，我一看就乐了——美国现在是两头使劲，可惜一头使在城墙上，一头使在自己脚上。

先说芯片。英伟达请了华尔街最贵的律师，去查自己"是不是被外国间谍盯上了"，国会那边同步又要把芯片限制收紧。这个事情其实很简单：一个瓜摊老板，发现隔壁开始自己种瓜了，第一反应不是改良品种，是翻账本查伙计。这就是守成心态。技术封锁这个东西，越到后面越像堵水，你堵一处，它渗三处。我们这边呢？阿里巴巴把芯片业务拿出来上市——家底厚了，才敢摆到台面上。战略相持阶段讲"互有攻守"，就是这么个味道。

再看那条家具厂的新闻，一家人从越南把厂子搬回美国，最后"算不过账"。这是今天最有分量的故事，可惜很多人当商业版花絮看。关税不是工厂，补贴也不是工厂。我讲过多少次，霸权不是靠嘴硬维持的，是靠工厂里的机器、实验室里的技术和老百姓的饭碗撑起来的。

AI那块也有意思：一边是一千三百三十亿美元的订单，一边是全行业最大的一家AI公司一年收入才一百亿。这不是工业能力，这是账本上的算术。工业这个东西，得有人拧螺丝，得有人守夜班，估值守不出来。

最后中期选举，共和党输得很难看，原因一句话——物价涨得比工资快。美国的问题从来不是本事不够，是共识不够：一个饭店老板，菜还没炒好就先掀桌子，客人自然就走了。对外还没打赢，对内先散了架。

所以2026年11月11日这一天，我的判断还是那六个字：战略相持，东升西降。

宋鸿兵——货币/债务/周期视角

宋鸿兵观察：2026年11月11日

如果你把美元环流看作一台机器，今天的读数只说明一件事：主阀门正在反向拧紧。

十月CPI连续第三个月顽固，十年期停在4.990%，美元指数升至四周高点——市场把十二月的问题从"降不降"改写成"加多少"。5%不是心理关口，而是债务滚动成本的反馈回路：一旦越过，付息压力自动追加发债，发债再推高收益率，这个回路不需要任何人推动就会自己转起来。

但今天最值得记下的不是美元强，而是日元弱。东京在七月单日抛出创纪录的500亿美元，还拉上美国联合干预，仍然丢掉了那个价位。这印证一条铁律：没有利差支撑的干预，不是防守，是捐款。汇率是一国货币的价格，价格由环流方向决定，不由央行意志决定。日本烧掉的是储备，想保住的是面子。

黄金停在4,023.80，美元涨0.48%，它几乎不动。战争、间谍调查、算力被窃，这些头条本该喂饱避险盘，可是没有。这不是黄金失效，而是市场仍在相信美元的清算能力——美元环流的断裂，还没有走到被定价的那一步。

真正的新战线在结算层：纳斯达克背景的Payward把两百多只欧洲股票做成代币。清算与结算一旦迁出中央银行的轨道，定价权就跟着迁移。这是金融高边疆上一次静默的登陆，比关税更值得警惕。

Consolidated briefing with Observer commentaries. Version 3. November 11, 2026.
